

(b) Claims 2 and 4 as being unpatentable over Schoolman taken with Dwyer, III in view of Spitzer and further in view of Funai et al.

(c) Claim 3 as being unpatentable over Schoolman taken with Dwyer, III in view of Spitzer taken with Funai et al. and further in view of Oka et al.

(d) Claim 5 as being unpatentable over Schoolman taken with Dwyer, III in view of Spitzer and further in view of Intriligator taken with Lewis .

(e) Claim 6 as being unpatentable over Schoolman taken with Dwyer, III in view of Spitzer and further in view of Nishi et al.

(f) Claims 8, 10, 14 and 16 as being unpatentable over Schoolman taken with Dwyer, III in view of Spitzer and further in view of Funai et al.

(g) Claims 9 and 15 as being unpatentable over Schoolman taken with Dwyer, III in view of Spitzer taken with Funai et al. and further in view of Oka et al.

(h) Claims 11 and 17 as being unpatentable over Schoolman taken with Dwyer, III in view of Spitzer and further in view of Intriligator taken with Lewis.

(i) Claims 12 and 18 as being unpatentable over Schoolman taken with Dwyer, III in view of Spitzer and further in view of Nishi et al.

These rejections are respectfully traversed.

Each of the independent claims of the present application is directed to an information processing device that includes a display device and an input operation device connected to a controller, “wherein said controller transmits a signal in the form of an electric wave to said display device” (emphasis added).

The Examiner alleges that Schoolman “teaches an input device connected to said controller, wherein said controller transmits a signal in the form of a[sic] electric wave to said display device

(col. 4, lines 61-68; col. 5, lines 1-13; col. 6, lines 50-59 and Fig. 1)." None of the other cited references is alleged to have this feature.

Applicants, however, have reviewed these citations and the rest of Schoolman and can find no teaching or suggestion in the reference of an electric wave or a controller that transmits a signal in the form of an electric wave to a display device. As none of the cited references disclose this claimed feature, the claims of the present application are patentable over the references. Accordingly, it is requested that the §103 rejections be withdrawn, and the claims allowed.

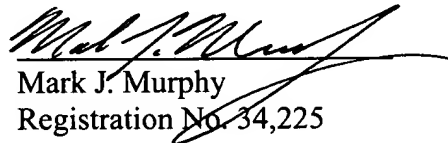

It is respectfully submitted that the application is now in a condition for allowance.

If any further fee is due for this amendment, please charge our deposit account 50/1039.

Favorable reconsideration is earnestly solicited.

Respectfully submitted,

Date: *September 19, 2002*

Marked-up copies of the claims as amended:

IN THE CLAIMS:

Please amend the claims as follows:

1.
2. (Third Amendment) An information processing device comprising:

a display device having flat panel displays for right and left eyes mounted on the head of a user;

a controller connected to said display device;

an input operation device connected to said controller; and

a camera,

wherein said controller transmits a signal in the form of an electric wave to said display device and wherein said flat panel displays are capable of displaying a plurality of pieces of information at a time, and

wherein said display device, said controller, said input operation device and said camera are adapted to be used by the same user.

22. (Amended) An information processing device comprising:

a display device having flat panel displays for right and left eyes mounted on a head of a user, each of said flat panel displays comprising a pixel thin film transistor and a driver thin film transistor provided over a same substrate, said driver thin film transistor provided in a driving circuit;

a controller connected to said display device;

an input operation device connected to said controller; and

a camera;

wherein said controller transmits a signal in the form of an electric wave to said display device and wherein said flat panel displays are capable of displaying a plurality of [pieces of information] window screens at a time, and

wherein said display device, said controller, said input operation device and said camera are adapted to be used by the same user.

23. (Amended) An information processing device comprising:

a display device having a flat panel display mounted on a head of a user;

a controller connected to said display device;

an input operation device connected to said controller; and

a camera,

wherein said controller transmits a signal in the form of an electric wave to said display device and wherein said flat panel display is capable of displaying a plurality of pieces of information at a time, and

wherein said display device, said controller, said input operation device and said camera are adapted to be used by the same user.

26. (Amended) An information processing device comprising:

a display device having a flat panel display mounted on a head of a user, said flat panel display comprising a pixel thin film transistor and a driver thin film transistor provided over a same substrate, said driver thin film transistor provided in a driving circuit;

a controller connected to said display device;

an input operation device connected to said controller; and

a camera,

wherein said controller transmits a signal in the form of an electric wave to said display device and wherein said flat panel display is capable of displaying a plurality of pieces of information at a time, and

wherein said display device, said controller, said input operation device and said camera are adapted to be used by the same user.
